CleanjectX / INJECTOR CLEANING MACHINE

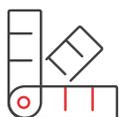

CleanjectX by Proxind is a one-of-a-kind machine to clean injectors, specifically designed for additive manufacturers.

Proxind's innovation lies in combining three functions, usually performed by three separate machines, into one convenient, portable and fully automatic device.

The cleaning of injectors is carried out by the machine using additives, with no need to disassemble any part of the vehicle, resulting in considerable time savings.

ADVANTAGES

+ COMPLETELY CUSTOMIZABLE

Private label customization

Graphic customization of the control panel with company logo

Customized design of the structure, both in shape and in corporate colors

Software with customized programming according to customer specifications

Possibility to show the brand and the commercial name of the liquids used

Your brand and your liquids will always be clearly visible

+ QUALITY MADE IN ITALY COMPONENTS

CleanjectX by Proxind is produced in Italy with top quality Italian components, which guarantee great reliability over time.

+ EASY TO USE

Use through a single operator

User-friendly and completely automatic

Display menu selectable through a simple press rotary switch

To avoid more serious potential problems, a preventive service to clean the injectors in diesel and gasoline engines is recommended, eliminating carbon deposits and combustion residues.

CleanjectX by Proxind allows all this treatment, with no need to remove any part of the engine, avoiding, in this way, a considerable waste of time and money.

+ INJECTION SYSTEM CLEANING - INJECT TREATMENT

With this treatment, **CleanjectX** cleans the injection system from carbon deposits and combustion residues, providing the vehicle with specific additives other than gasoline and diesel, with no need to remove the injectors nor to disassemble any part of the engine.

It is the only machine available on the market that keeps the pressure that the operator selects on the display constant, through the electronic board and an electronic pressure sensor.

The electronic board controls the pump speed, as well as the pressure when the operative conditions vary, such as when the injection system starts to be cleaned. This means that setting the pressure manually is no longer necessary.

SPECIFICATIONS	TECHNICAL DATA
Dimension of the standard model:	225 x 240 x 390 mm (W x H x D)
Weight of the standard model:	9 kg
Multilingual Software:	<ul style="list-style-type: none">• Languages present in the software: Italian, English, German, French, Spanish, Portuguese and Turkish• Possibility to integrate new languages in the software on request
Power supply:	12 Vdc - from the battery of the vehicle through a special power cord
Electronic board with microcontroller:	<ul style="list-style-type: none">• Automatic procedure with detection of the minimum level of liquid in both of the tanks through sensor of level• Constant and precise electronic regulation of the power supply pressure of the fuel of the vehicle
Pump:	<ul style="list-style-type: none">• Automatic magnetic drive pump with steel gear• Pressure 7 bar• Capacity 130 liters/h
Tank:	1 liter or 3 liters with minimum level sensor
Pipes of service:	2 pipes with quick-connect fittings
Display:	monochromatic alphanumeric 4 rows x 20 characters
