# Ozo**X**10

Ozone generator for the sanitation of the passenger compartment of the vehicle.

Proxind  
SAN X

proxind.it

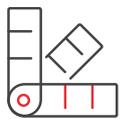

Proxind boasts more than 15 years of experience in the field of ozone sanitization.

Proxind's **OzoX10** is a sanitizer specifically designed for sanitizing environments and large vehicles (campers, caravans, trucks, SUVs, etc.) for garages, car dealerships, car rental companies, cab and transport companies, thus offering a sanitizing service to both their customers and operators.

Now more than ever, professional ozone generators are needed also to sanitise public and private environments such as offices, meeting rooms, waiting rooms, restaurants, cafés and hotel rooms to ensure better safety for their customers and operators.

## ADVANTAGES

### + FULLY CUSTOMIZABLE

Private label customization

Custom design of the external structure

Personalization with coating polyester sticker with colors and logo/brand

Your brand will always be clearly visible

### + QUALITY OF MADE IN ITALY COMPONENTS

**OzoX10** by Proxind is made in Italy with top quality Italian components, which guarantee great reliability over time.

### + EASY TO USE

Intuitive and fully automatic

Easy to use even by non-experienced staff personnel

One button controls power on, power off and treatment time

### + FOR THE AUTOMOTIVE INDUSTRY AND BEYOND

Now more than ever, sanitizing public and private environments is needed not only for the automotive industry.

### + ECOLOGICAL

Ozone has unique biocidal properties and does not require chemical products such as alcohol and chlorine to carry out its sanitizing action. In fact, it works according to the natural principle of oxidation.

### + PORTABLE

Thanks to its small size, it can be easily transported and placed inside the vehicle where the sanitizing process is necessary.

# Proxind Informs

## ***Sanitizing the passenger compartment of a vehicle has become a fundamental operation***

For the safety of operators and customers, now more than ever, sanitizing the passenger compartment after a maintenance operation, a rental or at the end of its daily use is necessary, as is the sanitation of public, work and domestic places at the end of the day.

The professional ozonator carries out a professional sanitization by eliminating viruses and bacteria, as well as unpleasant odors mainly due to fungi and mold in the A/C system and in the most inaccessible areas of vehicles and domestic environments.

### ***Ozone is the key!***

Ozone is a natural gas, recognized as a sanitizer, which acts with its disinfectant action on water, air, surfaces and fabrics.

Ozone works according to the principle of oxidation: when the ozone molecule (O<sub>3</sub>) comes into contact with something 'oxidizable', the extra oxygen atom (O) released by the ozone molecule binds with it, oxidizing it.

This is because ozone is a highly unstable element and tends to return to its initial form of oxygen (O<sub>2</sub>), releasing an atom of oxygen (O). Therefore, at the end, what remains are only molecules of oxygen (O<sub>2</sub>). In particular, ozone can oxidize the molecules that make up odors and microorganisms such as viruses, molds, spores and bacteria.

The process used to produce ozone is called 'Corona discharge'.

The ITALIAN MINISTRY OF HEALTH Prot. n.24482 31/07/1996 recognizes the use of ozone in the treatment of air and water, as a natural aid for the sterilization of environments contaminated by bacteria, viruses, spores, molds and mites.

The ITALIAN MINISTRY OF HEALTH CNSA 27/10/2010 recognizes ozone as a disinfectant and exterminator in the treatment of air and water.

## **AUTOMATIC AND INTUITIVE OPERATION**

**OzoX10** by Proxind features a four-step operation:

- 1 Connect the ozonator to the cigarette lighter socket after placing it on the passenger side mat of the vehicle you wish to sanitize.
- 2 For the duration of the selected time it transforms the oxygen present in the air of the cabin into ozone, which eliminates mold, fungi, viruses, spores and bacteria from the passenger compartment and the A/C system.
- 3 The sanitizing process ends when the timer inside the ozonator expires.
- 4 At the end of the sanitizing treatment, airing the passenger compartment for 10/15 minutes is advisable. Then, the vehicle can be returned to the customer in complete safety.

# OzoX10

Ozone generator for the sanitation of the passenger compartment of the vehicle.

SPECIFICATIONS	TECHNICAL DATA
Dimensions of standard model:	350 x 195 x 190 mm (W x H x D)
Weight of standard model:	3.90 Kg
Ozone production:	1000 mg/h or 6000 mg/h (with pure oxygen)
Power supply:	230 VAC - from socket through a special power cord
Absorbed current:	0.25 A or 1 A
Outer structure material:	Stainless steel
Ozone generator:	Corona Discharge through quartz glass tube
Treatment time display:	4 LEDs
OZO -1000 treatment time:	15 min (20m <sup>3</sup> ), 30 min (35m <sup>3</sup> ), 45 min (50m <sup>3</sup> ), 60 min (65m <sup>3</sup> )
OZO-6000 treatment time:	15 min (40m <sup>3</sup> ), 30 min (55m <sup>3</sup> ), 45 min (70m <sup>3</sup> ), 60 min (85m <sup>3</sup> )
