OzoX5 Pro

NEW

Ozone generator for the sanitation
of the passenger compartment of
the vehicle.

Proxind
SAN X

proxind.it

Proxind boasts more than 15 years of experience in the field of ozone sanitization.

OzoX5 Pro by Proxind is a vehicle sanitizer specifically designed for sanitizing vehicles for garages, car dealerships, car rental companies, cab and transport companies, thus offering a sanitizing service to both their customers and operators.

The machine sanitizes the passenger compartment and the A/C system of vehicles by eliminating unpleasant odors due to fungi, mold and bacteria in areas not always accessible with traditional cleaning.

ADVANTAGES

+ FULLY CUSTOMIZABLE

Private label customization

Graphic customization of outer structure

Customizable with polyester adhesive coating with company colours and logo/brand

Your brand will always be clearly visible

+ QUALITY COMPONENTS MADE IN ITALY

OzoX5 Pro by Proxind is made in Italy with top quality Italian components, which guarantee great reliability over time.

+ EASY TO USE

Intuitive and fully automatic

Easy to use also for non-experienced personnel

The user is guided through an easy and intuitive display menu

+ ECO-FRIENDLY

Ozone has unique biocidal properties and does not require chemical products such as alcohol and chlorine to carry out its sanitizing action. In fact, it works according to the natural principle of oxidation.

+ PORTABLE

Thanks to its small size, it can be easily transported and placed inside the vehicle where the sanitizing process is necessary.

+ INNOVATIVE CHARACTERISTICS

Graphic display with buttons that allow the setting of duration and start, pause, restart and end intervals. Furthermore, it allows the setting of the quantity of ozone to be generated.

Sensor for ozone quantity measurement (optional). Differently from other sensors on the market, in fact, it can measure the quantity of ozone at any time thanks to its internal battery that can last up to about two years.

Bluetooth pairing to smartphones, tablets and PCs, which allows the notification of the start, restart and end of the treatment (optional)

Proxind Informs

Sanitizing the passenger compartment of a vehicle has become a fundamental operation

For the safety of operators and customers, now more than ever, sanitizing the passenger compartment after a maintenance operation, a rental or at the end of its daily use is necessary.

The professional ozonator carries out a professional sanitization by eliminating viruses and bacteria, as well as unpleasant odors mainly due to fungi and mold in the A/C system and in the most inaccessible areas of vehicles.

Ozone is the key!

Ozone is a natural gas, recognized as a sanitizer, which acts with its disinfectant action on water, air, surfaces and fabrics.

Ozone works according to the principle of oxidation: when the ozone molecule (O₃) comes into contact with something "oxidizable", the extra oxygen atom (O) released by the ozone molecule binds with it, oxidizing it.

This is because ozone is a highly unstable element and tends to return to its initial form of oxygen (O₂), releasing an atom of oxygen (O). Therefore, at the end, what remains are only molecules of oxygen (O₂). In particular, ozone can oxidize the molecules that make up odors and microorganisms such as viruses, molds, spores and bacteria.

The process used to produce ozone is called 'Corona discharge'.

The ITALIAN MINISTRY OF HEALTH Prot. n.24482 31/07/1996 recognizes the use of ozone in the treatment of air and water, as a natural aid for the sterilization of environments contaminated by bacteria, viruses, spores, molds and mites.

The ITALIAN MINISTRY OF HEALTH CNSA 27/10/2010 recognizes ozone as a disinfectant and exterminator in the treatment of air and water.

AUTOMATIC AND INTUITIVE OPERATION

Proxind **OzoX5 Pro** features a four-step operation:

- 1 Connect the ozonator to the cigarette lighter socket after placing it on the passenger side mat of the vehicle you wish to sanitize.
- 2 For the duration of the selected time it transforms the oxygen in the air of the cabin into ozone, which eliminates mold, fungi, viruses, spores and bacteria from the passenger compartment and the A/C system.
- 3 The sanitizing process ends when the timer inside the ozonator expires.
- 4 At the end of the sanitizing treatment, airing the passenger compartment for 10/15 minutes is advisable; then, it is possible to give the vehicle to the client safely.

OzoX5 Pro NEW

Ozone generator for the sanitation of the passenger compartment of the vehicle.

SPECIFICATIONS	TECHNICAL DATA
Dimensions of standard model:	295 x 150 x 220 mm (W x H x D)
Weight of standard model:	2.50 Kg
Ozone production:	500 mg/h (with pure oxygen)
Power supply:	<ul style="list-style-type: none">• 12 Vdc - from cigar-lighter socket through a special power cable• 230 VAC with commercial-type external power supply 230 VAC/12 Vdc, 60W (optional)
Absorbed current:	2 A
External structure material:	Stainless steel
Ozone generator:	Corona Discharge through quartz glass tube
Working temperature:	from 0° to +60° C
Display:	monochromatic graphic display 128 x 64 pixels
Treatment time:	15 min (10m ³), 30 min (18m ³), 45 min (25m ³), 60 min (33m ³)
Board:	Electronic board with microcontroller
Sensor:	Battery-powered sensor for heated ozone quantity measurement (optional)
Bluetooth connection (optional):	smartphones, tablets and PCs. Notifications on the ongoing sanitizing treatment
