

## DPF CLEANER

It is a device which cleans the DPF of diesel engines, blocked by soot, ash and other contaminants, using appropriate detergents and restoring their original functioning, with no need to disassemble the DPF from the vehicle.

### **Main features:**

- .Easily clean and regenerate the particulate filters (FAP or DPF) of diesel engines with no need to remove them from the engine
- .Reduces maintenance costs related to manual regeneration of a clogged particulate filter.
- .Reduced cleaning and regeneration times

### **Specifications:**

- .Vehicle battery supply (12VDC)
- .Direct coupling gear pump 12 Vdc
